Education

Aptech, Advanced Diploma in Software Engineering (ADSE)

Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming, Machine Learning, Data Science, Fullstack Web & App Development, Database Systems, System Design, Cloud Computing, Critical & Analytical thinking.

Skills

Languages: Python, TypeScript, JavaScript, C++, Java, Golang, Dart, Swift

Frameworks: FastAPI, Django, Spring Boot, NestJS, Next.js, Flutter, Gin

Databases: PostgreSQL, MongoDB, MySQL

Tools: Git, Postman, Figma, Expo, Android Studio, XCode, Docker

Experience

HNG Tech, Software Engineer Intern

Oct 2025 – Dec 2025

- Developed high-throughput RESTful APIs with FastAPI/Django using inverted index search and TF-IDF ranking for semantic NLP queries (**sub-200ms latency** at p95).
- Contributed to Legal WatchDog's AI compliance engine using graph traversal to map regulatory dependencies, reducing **manual compliance** efforts by **50%** and accelerating audit cycles by **3x**.
- Built a document analyzer using OpenRouter's LLM APIs with chunking and embedding similarity search, achieving **92%** summarization accuracy.

SnapILabs, Software Developer Intern

Aug 2024 – Nov 2024

- Built SupaNote's AI workspace landing page with virtualized scrolling and debounced search, achieving **98+** Lighthouse score and **40%** lower bounce rate.
- Rebuilt Krea AI's UI from static mockups using component composition, delivering pixel perfect responsive implementation 2 weeks ahead of schedule, accelerating feature development velocity by **30%**.

Projects

Finomaly, Real-time Financial Anomaly Detection System

Python, PyTorch, PyTorch Geometric, Kafka, Redis, FastAPI, Docker

- Engineered real-time fraud detection pipeline processing 6.3M+ transactions using a dual-model architecture: a PyTorch Autoencoder (ROC-AUC 0.951) and a GraphSAGE GNN for structural anomaly detection, achieving **99.76% recall** and **4.8ms** per-transaction scoring **latency**.
- Built streaming inference layer with Redpanda (Kafka API) and Redis-cached GNN embeddings, delivering end-to-end detection in **<10ms** at **p95** and publishing flagged transactions to an alert topic consumed by downstream systems.
- Developed FastAPI REST API with model explainability, attributing each alert to the Autoencoder or GNN branch with human-readable reasons (reconstruction error z-score, balance inconsistencies, fraud-ring proximity) and validated with an ablation study proving both branches contribute complementary signal.

FarmIntel, AI-powered Agricultural Intelligence Platform

React, Python, Django, PostgreSQL, Hugging Face Transformers

- Engineered plant disease detection pipeline using a fine-tuned Vision Transformer (ViT) trained on 15K+ annotated images with **98%** accuracy and **<1.2s inference latency**.
- Architected RBAC for 4 entity types using Django middleware, JWT sessions, and OTP/Google OAuth, reducing unauthorized access by **92%**.
- Integrated Paystack billing with idempotent webhook handling and token bucket rate limiting for B2B clients.

Leadership

HNG Tech, Engineering Team Lead

- Architected a distributed notification microservice (Redis Streams pub/sub, idempotent delivery), spearheading a 3-engineer pod, reducing notification latency by **40%** (p95 <300ms).
- Drove CI/CD adoption (GitHub Actions + Docker), **tripling** deployment frequency and eliminating staging environment drift.

Aptech, Lead Hackathon Developer

- Spearheaded end-to-end UI redesign of a pet health mobile app serving veterinary appointment booking, medication tracking, and telehealth features; adopting a scalable design system with reusable flutter widgets.

Certifications

- Udemy, Make a 2D Action Platformer in Unreal Engine 5.
- NVIDIA, Building RAG Agents with LLMs.
